

**The Swissmed Hospital is a 73-bed facility of almost 8000 sq m provided medical care for patients both from Poland and abroad and it is the first health care institution of this kind in Poland. The Swissmed hospital won the title of Construction of the Year 2003 in a prestigious competition organised by the Polish Association of Construction Engineers and Technicians.**

## Swissmed Hospital, Gdansk

TAC Partner PROKOM Software SA designed and installed TAC's Open Systems solution for hospital buildings means that the systems for controlling and monitoring HVAC functions for optimal indoor climate and monitoring lifts, mechanical, electrical and medical gases systems are intelligent, flexibility for future expansions and upgrades. This solution simplifies work for the hospital's operational personnel, since all building functions are connected to the Building Management System LonWorks base - TAC Vista® IV include numerous network units from the TAC Xenta product range. In practice, this will mean that one person at a computer terminal will have full control of all systems and functions in all buildings of the hospital complex. In the event of an alarm, the TAC Vista system will pinpoint the location, indicated the cause and identify the action required. The system will also make it easy to actively work with energy optimization and to adapt and improve the indoor climate reduced operating costs.

### Project Highlights:

- Hospital
- Gdańsk, Poland, 2003
- BMS TAC Vista IV, TAC Xenta
- 1000 systems point
